- Contributed to the development of microservices using Node.js
- Implemented Aws Cognito and API Gateway for better security.
- Containerized front-end applications and microservices for various projects.
- Have hands-on experience of AWS Cloud Platform.
- Proficient with version control systems like Github, Git, CodeCommit etc.

PROJECTS

Security Interest Information Exchange Platform — *SIDBI*

The platform is a multi-party platform, where the security interest details flow from the borrower to the lender, and the credit bureau furnishes the credit check details . The project aims to create a gold standard in institutional lending by establishing a single source of truth for collateral information among borrowers like non-banking financial companies, called NBFCs, institutional lenders and credit bureaus.

Contract Management

Contract Management helps to make contracts between two organizations. They can track and trace the contract at every step and this is based on blockchain technology.

Records Management

Records Management helps to issue different certificates to common people and people/authorities can verify that also. This also manages the versions of documents/certificates.
